Summary

Full-Stack Developer with around 3.5+ years of experience in building and maintaining scalable web applications using Angular, Node.js, Golang, Java and RESTful APIs. Proven ability to integrate frontend and backend systems, optimize performance, and deliver user-centric solutions in agile environments.

SKILLS

Languages & Frameworks: JavaScript, Golang, TypeScript, Java, HTML, CSS

Frameworks & Libraries: Angular, Node, React, Bootstrap, Express.js,

Full-Stack Expertise: MEAN Stack (MongoDB, Express.js, Angular, Node), RESTful API Development

Databases: MongoDB, MySQL

Tools & Platforms: Git, Docker, Kubernetes, Microsoft Azure, CI

Development Methodologies: Agile, JIRA

Unit Testing Tools: Jasmine, Karma, Mocha, Chai

Experience

Senior Software Engineer, Mirafra Software Technologies

Feb 2026 – Present

- Designed and developed dynamic, responsive front-end architectures using Angular, improving user engagement and application usability.
- Architected and implemented robust RESTful APIs using Node.js, Express, and Java (Spring Boot), ensuring secure and efficient data handling.
- Optimized application performance through code refactoring, lazy loading, and efficient state management techniques.
- Led integration of frontend and backend systems with MongoDB and Java-based services, ensuring seamless data flow and consistency.
- Developed and maintained backend services using Java, contributing to scalable and high-performance enterprise applications.
- Collaborated with cross-functional teams in Agile environments, contributing to code reviews, sprint planning, and deployment processes using Git.

Software Developer, Jio Platforms Limited

Oct 2022 – Feb 2026

- Developed and deployed scalable web applications using Angular, Node.js and Golang, enhancing responsiveness, performance, and user engagement.
- Built reusable, modular UI components across Angular and React projects, ensuring faster development and consistent design systems.
- Optimized frontend performance using techniques like lazy loading, state management, and efficient change detection.
- Implemented responsive, accessible, and cross-browser compatible designs, ensuring smooth performance across devices.
- Integrated RESTful APIs and managed complex data flows for seamless, real-time user experiences.
- Collaborated with cross-functional teams in Agile sprints, aligning on requirements, managing timelines, and delivering high-impact solutions on schedule.
- Worked with Kubernetes to manage containerized application deployments, scaling, and orchestration in development and production environments.
- Utilized Microsoft Azure services for cloud-based application hosting, CI/CD pipelines, and infrastructure management, improving deployment reliability and scalability.

Projects

JioCX – Cloud Telephony Platform

April 2024- Present

- Built SMS campaign management client portals using Angular, Node.js and Golang, enhancing campaign execution, tracking, and overall user experience.
- Developed dynamic dashboards and interactive UI components, enabling real-time analytics and campaign performance monitoring.
- Implemented state management and reusable component architecture, ensuring scalability and consistency across modules. Optimized frontend performance through lazy loading, change detection optimization, and API response caching.

- Managed containerized application deployments and scaling using Kubernetes, ensuring efficient orchestration across development and production environments.
- Used Azure for cloud hosting, CI/CD, and infrastructure automation.

Inventory Monitor – Fuel Logistics System

May 2022 - March 2024

- Built real-time webapp with Angular and Node.js, integrating SAP APIs to improve fuel visibility and logistics accuracy.
- Built role-based dashboards with RESTful APIs and MongoDB, enabling real-time tracking for informed supervisor decisions.
- Deployed services using Azure Kubernetes Service (AKS) for scalable performance.
- Developed role-based dashboards with REST APIs and MongoDB.
- Created role-based dashboards with REST APIs and MongoDB; used Azure DevOps and Kubernetes for CI/CD and container orchestration.
- Implemented CI/CD pipelines using Azure DevOps and managed containers with Kubernetes.

PeopleFirst – Employee Management System

Oct 2022 - April 2023

- Developed a dashboard for interview processing, providing real-time candidate tracking, status updates, and analytics for recruiters.
- Enhanced performance and security by implementing role-based access control and frontend optimizations, enabling faster and safer user interactions.
- Created reusable UI components and modular architecture, ensuring scalability and consistent user experience across the platform.

Certifications

Front-end Development with React js, Coursera

Feb 2024

Server side JavaScript with Node.js -NIIT, Coursera

Feb 2024

Angular -The Complete Guide(2024 Edition), Udemy

Nov 2022

Education

B. N. College of Engineering and Technology - **B.Tech CSE**

2019 – 2022

Government Girl's Polytechnic - **Diploma CSE**

2016 - 2019
